- Ensures a healthier, safer and cleaner lab environment.

*Not available in 50 L Model (including top, back, and bottom plenum)

VIVOCELL™ PRECISE PARAMETER CONTROL

BEST UNIFORMITY AND CONTROL AMONG THE COMPETITION

Different lines represent different sensor positions inside the chamber. Esco CelCulture® has uniformity variance of less than $\pm 0.5^\circ\text{C}$ which means all the samples are evenly heated.*

Minimal fluctuation ($\pm 0.2^\circ\text{C}$) ensures temperature stability.*

FAST CO₂, TEMPERATURE AND HUMIDITY RECOVERY WITHOUT OVERTHOOT

Precisely-tuned sensor and software result in fast recovery of CO₂ without overshoot. This ensures uniform CO₂ levels even with frequent incubator door opening.

Recovery of both temperature and humidity is twice as fast as conventional incubators.

- Company A's model: overshoot.
- Company B's model: slow recovery.
- Esco CelCulture®: fast recovery, no overshoot.

DIRECT HEAT AND AIR JACKET

- Direct heating enables rapid temperature recovery while air jacket provides isolation against ambient temperature fluctuations.
- Precise heating in the chamber is achieved by using 8 heaters located in 3 zones. The 3 zones are intelligently controlled by the microcontroller for best temperature uniformity and minimal fluctuation.

Note: For CCL-50, CCL-170, CCL-170-HITEMP, and CCL-170-HHS models, heaters are located in 4 zones (main, bottom, outer door, and back).

- The main heater provides precise temperature control.
- The bottom heater warms the water pan and provides humidity.
- The outer door heater prevents condensation on glass door and facilitates temperature recovery.

VENTIFLOW™ FORCED CONVECTION

- No disturbance to cell culture.
- Blower automatically stops when door is opened to minimize mixing of chamber and room air.
- Accelerates recovery of chamber air to ISO Class 5 Cleanliness after door closing to prevent contamination.
- Improves CO₂, humidity, and temperature uniformity.
- Filtered air circulates across water pan to accelerate humidifying process.

*Units were factory-tested under controlled environmental conditions per DIN 12880 standard and Esco method. Esco does not guarantee identical results in the field under differing conditions. Original report available upon request. Model used in the test is CCL-170B-8.

ROBUST CONTAMINATION CONTROL

STERISAFE™ ULPA FILTRATION SYSTEM

- Chamber air is continuously filtered by ULPA filters to keep the chamber at ISO Class 5 cleanliness. This ensures that all contaminants from both room air and chamber air are filtered, thus only clean air is recirculated.
- ULPA filters operate at 99.999% efficiency, superior to conventional HEPA filters which are 99.99% efficient.
- Chamber achieves ISO Class 5 cleanliness 11 minutes after door closing.*

* Units were factory-tested under controlled environmental conditions per Esco method. Esco does not guarantee identical results in the field under differing conditions. Original report available upon request. Model used in the test was CCL-170B-8.

VALIDATED SWIFTCON™ OVERNIGHT DECONTAMINATION CYCLE

Microorganisms	Before Decon	After Decon
<i>Bacillus atrophaeus</i>	1.59 x 10 ⁶	0
<i>Aspergillus brasiliensis</i>	1.52 x 10 ⁴	0
<i>Pseudomonas aeruginosa</i>	2.38 x 10 ⁶	0
<i>Staphylococcus epidermis</i>	2.33 x 10 ⁶	0
<i>Escherichia coli</i>	1.57 x 10 ⁶	0
<i>Staphylococcus aureus</i>	5.72 x 10 ⁶	0
<i>Enterobacter faecalis</i>	2.15 x 10 ⁶	0

- The automated SwiftCon™ 90°C moist heat decontamination cycle has been proven effective in deactivating normally resistant fungi, bacterial spores, and vegetative cells by the Health Protection Agency (HPA) in UK.
- Full decontamination cycle completes within 15 hours.
- Chamber is cool and dry at the end of the cycle. No further wipe down is needed.*

- Independently proven to be as effective as high temperature decontamination.
- Lower temperature causes less damage to electronic components, therefore prolongs the life span of the incubator.

*Not applicable to CCL-50L unit since it has no decon pump to dry the chamber and condensation will normally occur in the chamber after the cycle. Further wipe down is therefore required after the cycle is done.

GAS INJECTION LINES ARE FILTERED

- All gas injection lines are filtered via 0.2 micron inlet filters to remove impurities and contaminants before being injected into the chamber.
- Inlet filters are field-replaceable and are located external to the incubator.

OPTIONS AND ACCESSORIES

COA-1001 / COA-1001-F Humidity Display

This option allows the incubator to monitor the relative humidity inside the chamber. The probe for the sensor works in freezing conditions (-70°C) and also in temperatures up to 180°C. The sensor is easy to install and has excellent accuracy. The airflow in the chamber does not affect the measurement. The sensor is maintenance-free. It does not need to be removed during 90°C moist heat decontamination cycle.

COA-1002 / COA-1002-F CO₂ Backup

This option allows two tanks of CO₂ to be connected to the incubator. It will automatically switch from the primary tank to the secondary tank when low gas pressure is detected on the primary tank.

COA-1005 / COA-1005-F Analog Output

A set of relay contacts is provided at the rear of the incubator that allows the incubator to output analog signals representing the temperature, CO₂ / O₂ content and relative humidity, depending on the options available in your incubator. This allows the chamber to be connected to an in-house data acquisition or alarm system. This option can also be field-installed.

The analog signal outputs can be set to operate in either voltage DC (0-5 Vdc) or current (4-20 mA) mode. The factory default setting is voltage. Switch on the board to toggle between the modes.

COA-2030/ COA-2030-F Sealed Inner Door Kit with 2 glass doors (50L) COA-1006/ COA-1006-F Sealed Inner Door Kit with 4 glass doors (170L) COA-2029/ COA-2029-F Sealed Inner Door Kit with 4 glass doors (240L) COA-2040/ COA-2040-F Sealed Inner Door Kit with 6 glass doors (240L)

CelCulture® CO₂ incubators can be equipped with 2, 4 or 6 glass doors, that can be opened horizontally which allows access to defined sections of the incubator without affecting much the inner atmosphere of the chamber. This minimizes recovery time and contamination risks. The sealed-inner door is also reversible as same as the outer door which can be installed to be opened either from-right-to-left or from-left-to right. The sealed-inner door is available as a factory-installed option or field installed retrofit kit.

Note: Not available for CCL-HHS models

COA-1007 / COA-1007-F N₂ Back-up

This option allows two tanks of N₂ to be connected to the incubator. It will automatically switch from the primary tank to the secondary tank when low gas pressure is detected on the primary tank.

COA-2018-F (50L) / COA-2001-F (170 L) / COA-2019-F (240 L) Roller Base

Roller base is available with casters for mobility of your incubators and to provide protection against floor contamination.

COA-2020-F (50L) / COA-2002-F (170 L) / COA-2021-F (240 L) Floor Stand 200 mm (8.0") With Adjustable Feet

Floor stands are available with adjustable feet, with a nominal range of 180 mm to 250 mm (7.1" to 9.8") for comfortable access to the incubator and to avoid floor contamination.

COA-2022-F (50L) / COA-2003-F (170 L) / COA-2023-F (240 L) Floor Stand 700 mm (27.6") With Casters

This support stand raises the incubator to a height of 700 mm (27.6") above the floor for comfortable access. It comes with casters for mobility of your incubators.

COA-2005-F 2-Stage Gas Regulator for CO₂/N₂

CO₂ and N₂ gas input regulators reduce pressure from the tank to the incubator. It has dual pressure gauges, barbed line connection and shut-off valve. It prevents over-pressurization of the gas supply into the incubator which could cause the tubing to burst.

- CGA 320 connector (U.S. Standard)
- BP-BS341-#8-NT4 connector (British Standard)

Note: Compatible with European DIN477, French NFE29-650 and Australia AS2473

- G5/8-RH connector (China Standard)

COA-2024-F (50L)/ COA-2007-F (170 L)/ COA-2025-F (240 L) Extra Shelf (Stainless Steel) for Standard Stainless Steel Chamber

COA-2026-F (50L) / COA-2027-F (170 L) / COA-2028-F (240 L) Extra Shelf (Copper) for Standard Copper Chamber

Each CelCulture® CO₂ incubator comes standard with 3 shelves for 50 L / 4 shelves for 170 L & 240L and it can accommodate up to a maximum of 4 shelves for 50 L / 7 shelves for 170 L & 240 L.

Advanced Cell Culture with Esco CO₂ Incubator and CelCradle™

CELCRADLE™ : CRADLE FOR HIGH DENSITY CELLS

CelCradle™ is a cost-effective, single-use benchtop bioreactor system capable of supporting high density culture of adherent cells. It is designed based on the concept of bellow-induced intermittent flow of media and air through porous matrices, where cells reside. This provides a low shear stress, high aeration, and foam-free culture environment.

During operation, the CelCradle™ bottle is partially filled with media and inoculated with cells. The media is raised and lowered alternately to submerge and expose the matrices, creating a dynamic interface between air and media on cell surface to maximize nutrient uptake and oxygen transfer.

CelCradle™ system is part of the tide motion bioreactor system, which features linear scalability up to 5,000 L packed bed volume!

BioNOC™ II: Heart of the Tide Motion System

BioNOC™ II are macrocarriers that allow attachment of cells for adherent cell culture. Each CelCradle™ bottle consists of 5.5g of BioNOC™ II carriers, providing 15,000 cm² of surface area for attachment and growth of cells. Apart from its high surface area, BioNOC™ II carriers feature enhanced biocompatibility, long hydrophilicity, high porosity, low lint content, and excellent mechanical strength. The characteristics of BioNOC™ II, combined with the tide motion principle, allow the CelCradle™ system to support the high density culture of adherent cells.

Features:

- Stainless Steel 304 L BA CelCradle™ Stage capable of operating 4 CelCradle™ bottles simultaneously and compatible with a CO₂ incubator
- Pre-sterilized and ready-to-use disposable CelCradle™ bottles
- Provides a low shear stress and foam-free culture environment that has no O₂ limitation
- A single CelCradle™ bottle has the same productivity of up to 18-20 pieces of 850 cm² roller bottles
- Compact design allows the CelCradle™ to be placed inside a 6 ft³ CO₂ incubator
- Easy parameter optimization
- Capable of performing batch, fed-batch or perfusion culture mode
- Compatible with most media formulations including serum-free media
- Contains BioNOC™ II carriers with specially treated surface to allow growth of most anchorage-dependent cells. BioNOC™ II also allows easy harvest of whole cells, cell components or secreted proteins
- Easy-scale up by using additional bottles or by using TideCell® bioreactor system

Applications:

- Human and Animal Vaccines
- Autologous and Allogeneic Cell Therapy
- Culture of anchorage-dependent/ adherent cells
- Overcome limitations of stirred tank bioreactors using microcarriers
- Conversion from Roller Bottles to closed system, single-use cell culture
- Mammalian and insect cell research
- Monoclonal antibody production
- Protein production
- Vaccine production

CELCRADLE™ BATCH SYSTEM

Useful for batch and semi-batch operation where process components are easily traceable.

Simple to operate - virtually no learning curve

Controller - adjusts nutrient and gas exchange of the bottle

Magnetized controller enables convenient positioning on the outside surface of the incubator

Bottle cap is integrated with 0.22µm ventilation filter

BioNOC™ II - acts as the packed bed where cells can adhere to, simplifying media replacement and product harvesting

Sampling Port - enables aseptic removal of BioNOC™ II macrocarriers for cell counting

Retaining Ring - locks bottle in place in the CelCradle™ Stage

Collapsible bellows

CELCRADLE™ CONTINUOUS SYSTEM

Extremely compact system fits in most standard CO₂ incubators.

Easy to read LED display

Up: 1.5 mm/s
T_H: 04 M 04 S ^

Useful for continuous operation where process components are easily traceable

Tubing set with peristaltic pump head enable recirculation and continuous feeding of nutrient

CelFeeder enables 4-pump operation with individual programming setting

Autoclavable pump head supports consistent, calibration-free feeding rate
